

## ORGANIC AGRICULTURE

- **Ranking 12th in the nation**, Michigan has **826 organic businesses**, 572 of those being organic farms with **nearly \$272 million** in sales in 2021.
- Michigan's top organic **commodities are traditional field crops like corn, soybeans, and dry beans.**
- Michigan's organic market **grew 18% from 2019-2021**. The national organic market is projected to grow **another 28% through 2029** due to increasing consumer demand and interest in climate-resilient agriculture.
- Michigan reported **over 117,000 certified organic acres** in 2021.
- **83% of Michiganders** purchase organic products, above the national average.

## ORGANIC RESEARCH

- The National Institute of Food and Agriculture (NIFA) **has awarded over \$17.5 million in grants** to the state's research institutions for organic research, **which translates to over \$350 million in economic activity**, according to the Economic Research Service.
- The Agricultural Research Service (ARS) has **no projects** in the state researching organic topics, **revealing a significant gap in the agency's research portfolio**
- Michigan State University has played a crucial role in organic agriculture research, investing **over \$2 million in research** on organic farming since 2018 that directly answers farmer concerns.
- One crucial research project at the University of Michigan is working to identify the different soil health benefits of different cover crop mixtures for organic farms.

## ORGANIC MARKET & RESEARCH'S ROLE

Nationally the organic market continues to experience significant growth, **organic produce now makes up more than 15% of the total produce food sales**. Despite this growth, **organic agriculture research funding makes up less than 2% of the total research budget at the USDA**, and less than 1% of the Agricultural Research Service's budget.

Organic farmers require research that does not depend on aligning chemistry with genetic traits, but aligning natural systems to create vitality and a resilient agroecological system. Put simply, **organic research is applicable to all farming systems**, where chemistry- and genetics-focused research is not always applicable to organic farmers.

Ensuring that the USDA's research budget is applicable to all farmers and is focused on public welfare is **essential to sustain organic agriculture's growth and fully leverage its economic potential**.

### REGIONAL RESEARCH PRIORITIES

- **Climate adaptation and resilience:** Research on organic farming systems resilient to consistently changing climatic conditions.
- **Weed, pest, and disease management:** Non-chemical solutions tailored to organic systems. Invasive species like the Spotted Wing Drosophila offer unique challenges organic producers of perennial crops like stone-fruit and berries.
- **Soil health:** Advancing organic practices that improve soil fertility, structure, and carbon sequestration that help farmers control their production costs through nutrient cycling of on-farm materials like cover crop residue or composted animal manure.

### NATIONAL POLICY PRIORITIES

- **Increase organic agriculture research:** Boost USDA's ARS (Agriculture Research Service) organic research funding to 6% (current: 1%) with a request for \$35M in appropriations.
- **Expand NIFA organic research:** Bring funding for USDA's NIFA organic research programs to \$150 million a year by increasing the Organic Research and Extension Initiative and Organic Transitions Research Program budgets.
- **Fully fund the Organic Data Initiative (ODI):** Expand and modernize ODI with a \$1M appropriation to improve organic data collection and reporting.
- **Support Sustainable Agriculture Research (SARE):** Fully fund SARE by securing \$60M for research into sustainable farming practices.

## ABOUT THE ORGANIC FARMING RESEARCH FOUNDATION

OFRF is a non-profit organization founded in 1990 to advance organic agriculture through scientific research. As champions of organic farmers across the U.S., we work to foster the improvement and widespread adoption of organic farming systems by cultivating organic research, education, and federal policies that bring more farmers and acreage into organic production. Through these efforts, we are working to create a more resilient and sustainable agricultural system that values healthy environments and healthy people.
